Charger & Power Strip Compliance Documents for Amazon

What sellers actually get asked for — and what usually causes a listing to be removed.

The short version

For most charger and power strip listings, Amazon asks for two things:

1. **A safety test report** (to a recognised standard)
2. **EMC evidence** (FCC for the US)

Everything else depends on what the product contains — especially whether it has a **lithium cell**.

Core documents

Document	When you need it	Notes
Safety test report	Always	UL 62368-1 or ETL (US) · EN IEC 62368-1 (EU/UK) · must list **your model number**
FCC SDoC or **FCC ID**	US — always	SDoC for ordinary chargers; **FCC ID** if it transmits (wireless chargers)
DoC / EU Declaration of Conformity	EU / UK	Must name the manufacturer and the directives
UKCA marking	UK	Separate from CE — check the current transition rules
UN38.3 test summary	Any lithium cell (power banks especially)	This is the single most common cause of power bank removals
MSDS / SDS	Any lithium cell	Must match the actual cell
Product images	Always	Must show markings, model number and warning labels clearly

Why listings get removed — the 5 usual reasons

1. The report does not show your model number.

The most common cause. A report for a similar model is not accepted. Check character by character, including suffixes.

2. The standard is retired.

`UL 60950-1` / `EN 60950-1` are the old IT-equipment standards. Chargers should be tested to **62368-1**. A report against the old standard is rejected by most category teams.

3. A power bank ships without UN38.3.

This is treated as a safety issue, not paperwork. The listing is usually suppressed first and questions come later.

4. The markings in the images do not match the documents.

Model number, input/output ratings and certification marks must be visible **and identical** across images and reports.

5. "UL report" was submitted where "UL Listed" was required.

A test report and a certification are different things (see the note below). For some categories and some retailers, only the certification is accepted.

The UL question — read this before you submit

Term	What it means	Can you use the UL mark?
UL test report	Samples were tested to a UL standard	**No**
UL Listed / Classified	Certification including factory inspection	**Yes**
ETL (Intertek)	NRTL certification, equivalent in standing to UL	**Yes** (ETL mark)

Both the report and the certification are legitimate documents. They are simply **not interchangeable**. If your supplier gives you a test report, submit it as a test report — do not describe it as "UL certified."

> **Note for this supplier's range:** UL documentation is available as **UL 62368-1 test reports**. Whether UL Listed certification also exists for a given model must be confirmed per model before any claim is made.

Pre-listing checklist

- ☐ Safety report lists my exact model number
- ☐ Standard is **62368-1** (not 60950-1)
- ☐ FCC evidence present — SDoC or ID, correctly matched to the product type
- ☐ If it has a battery: **UN38.3 + MSDS**, and the cell matches the product
- ☐ Product images show markings, model, ratings and warning labels
- ☐ DoC names the manufacturer and the directives
- ☐ Any claim I make in the listing matches a document I hold

Still worth doing even when not required

- **A CB report.** Not required by Amazon, but if you plan to sell in more than one market, a CB report lets you obtain national approvals without retesting from scratch. Ask your supplier for it at the sourcing stage — it is much cheaper than adding it later.
- **Keep the full test report, not just the certificate.** When a listing is challenged, the certificate alone rarely resolves it. You will be asked for the report.

Compiled November 2026. Amazon's requirements change by category and marketplace — always check the current compliance page before listing.
